

MouserWorks Themes

Gravitate Theme Read Me

Enhanced Navigation Panel

The theme includes an advanced popup navigation panel that allows you to add text, icons or images to your navigation.

While it looks complicated, it is rather easy to define your Navigation Panel in a few steps. To add the custom content to the Navigation Panel, under Settings / Code / Body, you will need to add some code for each page in the panel.

In the Navigation Instructions and in the Demo Project is the code for several layout choices. Each varies according to your content, but generally work the same. Please check out the instructional video at mouserworks.com/support/gravitate.

Banner

Gravitate uses the Banner option in Rapidweaver to let you use your own banners. The recommended banner size is 500x1500 to 1000x1500, but the theme will adjust the size automatically for various page widths. If you do not define a banner, the default image will be used.

UIKit

Gravitate is built on the UIKit Framework. Some Components have Rapidweaver Snippets for their use, see Snippets Read Me. While some options of UIKit are not used in the theme, you can use any of the Components in UIKit by way of HTML code or CSS. Information is at <http://getuikit.com>.
